

# AnalogMAX-DAQ2: A Programmable 16-Bit $\mu$ Module<sup>®</sup>-Based Data Acquisition Development Platform

## Based on Analog Devices' ADAQ7980 16-Bit 1 MSPS, $\mu$ Module<sup>®</sup> Data Acquisition System

AnalogMAX-DAQ2 is a high-accuracy data acquisition platform that meets footprint, power, and reliability requirements of measurement instruments in industrial, medical, and scientific applications. The data acquisition platform is based on the high-impedance, programmable ADC driver stage using AD8251 driving the ADAQ7980, a 16-bit  $\mu$ Module<sup>®</sup> that integrates several signal chain components into a tiny LGA 4 mm x 5 mm package. This platform is ideal for small form factor systems that require accurate and reliable operation over long periods of time. The non-volatile low-cost Intel<sup>®</sup> MAX<sup>®</sup> 10 FPGA offers 8K Logic Elements (LEs) and a flexible environment to customize designs for a variety of use cases.

The ADAQ7980  $\mu$ Module<sup>®</sup> solution contains a high accuracy, low power, 16-bit SAR ADC, a low power, high bandwidth, high input impedance ADC driver, a low power, stable reference buffer, and an efficient power management block. The level of system integration in the ADAQ7980 solves many design challenges, while the devices still provide the flexibility of a configurable ADC driver feedback loop to allow gain and/or common-mode adjustments. The  $\mu$ Module<sup>®</sup> shortens the analog signal chain design time and improves time to market.

### Benefits of the AnalogMAX-DAQ2 Platform

- > **Simplifies analog signal chain design:** The level of integration in ADAQ7980 simplifies the development of high-accuracy data acquisition systems
- > **Flexible platform:** Based on the programmable Intel<sup>®</sup> MAX<sup>®</sup> 10 FPGA, easily adjusts to a wide range of use cases and production needs
- > **Rapid prototyping and product development:** Rapid development and testing with an out-of-the-box experience that includes a Jupyter notebook demo with Python code
- > **Quick customization services:** Add new functionality, lower BOM cost, or have the complete product designed

## $\mu$ Module<sup>®</sup> Data Acquisition Development Platform Based on Intel<sup>®</sup> MAX<sup>®</sup> 10 FPGA

Part #: [AnalogMAX-DAQ2](#)

### Signal Spectrum

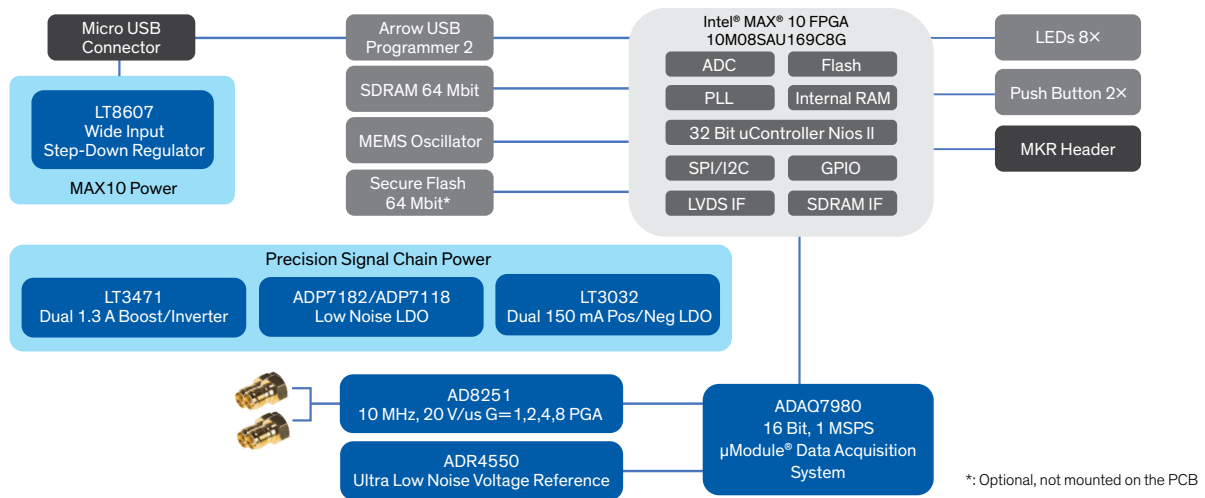

Input signal is a 1 kHz sine wave

DAQCapture Windows Application

## AnalogMAX-DAQ2 Block Diagram

## Hardware Features

- > 16-bit, 1MSPS,  $\mu$ Module® data acquisition system (Analog Devices ADAQ7980)
- > Power: Small foot-print, low-noise power design
- > On-board Intel® MAX® 10 FPGA to combine and process data from multiple sensor inputs
- > Memory: SDRAM Memory up to 64 Mb @ 166 MHz, 64 Mb Quad SPI Flash and 4 Kb EEPROM Memory
- > Dual high-speed USB to multipurpose UART/FIFO IC
- > I/O interface: 23  $\times$  GPIO

## Software and Demo Features

- > Works out-of-the-box with the latest code and documentation all available on [wiki](#) and [GitHub](#)
- > User experience includes intuitive demos featuring the Jupyter Notebook software tools or with the standalone Windows application DAQCapture. Jupyter notebook is flexible and extensible. DAQCapture is simple and easy to use. Both can be operated in a loopback mode, and do not require a source waveform.

## Key Components

### Analog Signal Chain

- > ADAQ7980: 16-bit, 1MSPS,  $\mu$ Module® data acquisition system
- > AD8251: 10 MHz,  $G = 1, 2, 4, 8$  iCMOS® programmable gain instrumentation amplifier
- > ADR4550: Ultra-low noise, high-accuracy 5.0 V voltage reference

### Power

- > LT8607: 42 V, 750 mA synchronous step-down regulator with 2.5  $\mu$ A quiescent current
- > LT3471: Dual 1.3 A, 1.2 MHz boost/inverter in 3 mm  $\times$  3 mm DFN

### Processor

- > Intel® MAX® 10 FPGA: Non-volatile low-cost FPGAs (part #: 10M08SAU169C8G)

## Features of the ADAQ7980 16-Bit 1 MSPS, $\mu$ Module® Data Acquisition System:

- > Low-power data acquisition system with 16-bit, 1MSPS  $\mu$ Module®
- > Includes all critical passive parts
- > INL:  $\pm 8$  ppm typ.
- > SNR: 91.5 dB typ.
- > THD: -105 dB at 10 kHz
